

Sierra Gold Nurseries

New Prune Rootstock
FIRST LOOK!

DA6

HIGH-DENSITY PRUNE ROOTSTOCK

A limited quantity of trees are available for testing by growers interested in seeing for themselves the difference in tree potential with DA6.

DA6 has excellent anchorage, wet-soil tolerance, no root suckering, and vastly lower chloride uptake than even the most salt tolerant commercial rootstocks. This rootstock is a top choice for high-density prune plantings.

Excellent Anchorage

Tolerates Water-Saturated Soils + Salinity

Tolerant of Root Knot Nematode

Adapted to Heavy Soils

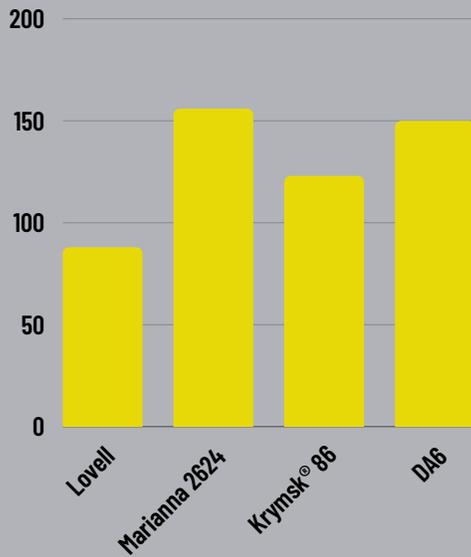

No Root Suckering
